Background Checks  
Hosted Training and Testing  
Employee and Contractor Badging

eRailSafe is the Government's standard for workforce screening of railroad employees and contractors.

**Do you screen your railroad employees and contractors?**

Since 2003, eRailSafe has been the premier Workforce Safety and Security Management program for Class 1 Railroads and the third party contractors and vendors that serve them. The purpose of the program is to improve the security of railroad employees, operations and facilities. As part of these efforts, designated railroad contractors, vendors and suppliers are required to comply with the program, which includes:

## Background Checks

Contractor and vendor personnel are required to submit to background investigations, including the following security checks:

- Criminal and Civil Background Screening Reports
- Education and Employment Verification
- Social Security Number Validation

## Employee and Contractor Badging

- Contractor/Vendor Personnel are required to wear eRailSafe ID Badges when on railroad property
- Badges are issued upon successful completion of background investigation and compliance testing

## Hosted Training and Assessments

- Contractor/Vendor Personnel must complete required safety and security awareness tests
- Users participate in mandatory training and testing, which includes Rail Security Awareness Training and Contractor Orientation via the web
- Both training modules are staples of the program and are administered by all participating rails, with specific training customized for individual operations

The information collected is audited by the subscribing railroads and the contractor to help determine an employee's eligibility to access relevant facilities. The screening also ensures that contractors and their employees are in compliance with internal and regulatory requirements.

## Benefits of the eRailSafe Program

- Comply with Federal Government safety standards and railroad compliance
- Create a uniform process for the railroad industry through training/testing, comprehensive background checks and the issuance of an ID credential to access property
- Improve efficiency of managing both internal and external audits by accessing centralized information for each participating railroad
- Cost-savings through improved process efficiency for railroads
- Contractors benefit through standardized pricing to access various railroad properties
